

PALLET DISPENSER

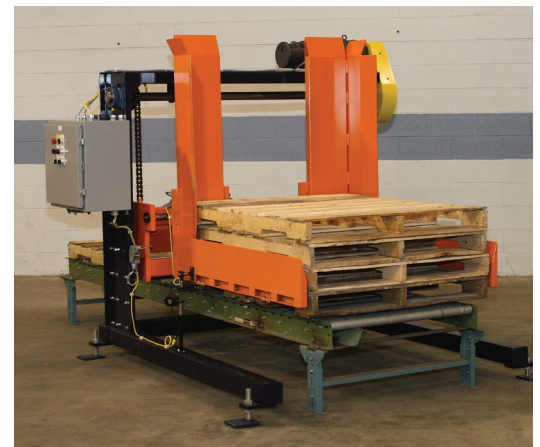

Reload pallets without holding up robot operations

Description:

The Motion Controls Pallet Dispenser is the perfect addition to a new or existing robotic palletizing cell since it helps operators to reload pallets without holding up robot operations. The pallet dispenser can also be used to feed empty pallets into any system. The dispenser discharge conveyor can fit through the safety fence allowing manufacturers to isolate the loading of the pallets from the working robot. Motion Controls' pallet dispenser will help keep your robotic palletizing cell operating efficiently and productively.

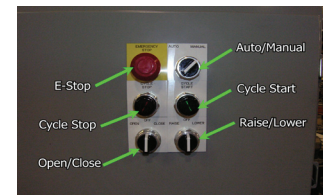

Benefits

- Durable, lightweight construction means ease of transportation and relocation
- Increased throughput
- High reliability and uptime
- Stand-alone operation requires only electrical power and an air supply
- Requires only one signal, manual or remote, to initiate pallet dispensing
- Simple push-button controls

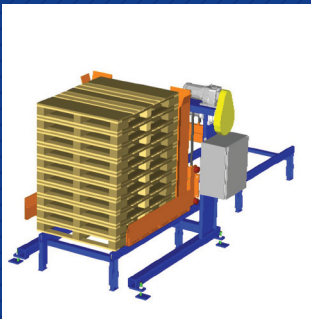

Motion Controls Pallet Dispenser Standard Features

- Designed for standard 40" x 48" Commonwealth Handling Equipment Pool (CHEP) pallets, 40" x 48" Notched 3 Stringer pallets and Grocery Manufacturers Association (GMA) pallets
- Can be customized to handle other pallet sizes
- Standard capacity is 10 pallets
- Dispensing rate is two (2) pallets per minute
- Faster dispensing rates available
- Dispensing height is 18" but can be designed to fit your application
